# C: Othello

原案: vvataarne

解説:rika0384

#### 問題概要

黒の石が1つ欠けた状態からオセロをする

q個のクエリがあり、各クエリで

右上を(a,b)、左下を(c,d)とする長方形領域に

置ける石の個数の最大値を求める

1 <= q <= 100000

どこに石が置けるかを実験してみる

(i mod 2, j mod 2) = (0,1) となる場所以外は 石を置けそう

(i mod 2, j mod 2) = (0,1) の場所は 本当に石が置けないのか???

マス (i, j) に黒石を置きたい場合、周囲がどんな状況になっている必要があるか?

(i, j)			
(i, j)			
(i, j)			
		(i, j)	

マス (i, j) に黒石を置きたい場合、周囲がどんな状況になっている必要があるか?

マス (i, j) に石を置きたい場合、周囲がどんな状況になっている必要があるか?

$$(i-2, j-2) (i-2, j) (i-2, j+2)$$

$$(i, j-2) (i, j+2)$$

$$(i+2, j-2) (i+2, j) (i+2, j+2)$$

の少なくとも1つに同じ色の石がないといけない

初期状態には(i mod 2, j mod 2) = (0,1) の 場所に石が1つもない

つまり、石をどのように置いていっても (i mod 2, j mod 2) = (0,1)の場所に石を 置くことはできない

#### 解法

与えられた長方形領域のマス目の個数から 長方形領域内の(i mod 2, j mod 2) = (0,1)となる マス目の個数を引いたものが答え

盤面のサイズが8\*8なので、クエリごとに 2重ループを回して個数を数えても間に合う
